

ANALYST PROGRAM CANDIDATE | INVESTMENTS & ANALYTICS

Wake Forest MSBA candidate with a Finance and Economics degree who builds investment research and quantitative models designed to hold up under scrutiny. Valued RTX with a DCF and peer comps, then audited and rebuilt the model after finding two errors; led modeling on a neural network ensemble that reached 0.984 AUROC on held-out patients; and has traded index futures under defined risk limits since 2020. Licensed P&C insurance representative skilled at turning risk into clear recommendations.

EDUCATION

Wake Forest University School of Business, Winston-Salem, NC

Master of Science in Business Analytics, Expected May 2027

Relevant Coursework: Machine Learning, Data Management (SQL), Python Programming, Statistical Thinking, Data Storytelling

University of North Carolina Greensboro, Greensboro, NC

Bachelor of Science in Economics & Finance, December 2025

Relevant Coursework: Investments, Futures & Options, Financial Statement Analysis, Business & Economic Statistics

CORE SKILLS

Investment Research & Valuation | Financial Modeling | Machine Learning | Risk Management | Data Storytelling

Quantitative Analysis | Model Validation | Financial Statement Analysis | Client Communication | AI Productivity Tools

TECHNICAL SKILLS

Finance & Investment: DCF, CAPM, WACC, FCF, P/E & EV/EBITDA Comps, Sensitivity Analysis, Peer Benchmarking

Quantitative & Programming: Python (pandas, NumPy, TensorFlow/Keras, scikit-learn), Regression, Backtesting

Data Tools: SQL (in progress), Excel (Financial Modeling, PivotTables, VLOOKUP), Tableau (Certified 2025), Claude

Certifications: NC Property & Casualty License (Jan 2026); Intel Global Career Accelerator: Data Analysis & Visualization (2025)

Languages: Fluent in English and Spanish

PROFESSIONAL EXPERIENCE

Client Services & Sales Representative | **Eddie Collins State Farm** | Greensboro, NC

July 2025 – July 2026

- Made 20+ outbound calls daily to qualify prospective clients for licensed agents; after earning NC P&C licensure, advanced to independently quoting and advising clients on coverage.
- Maintained accurate client records in Salesforce CRM while collaborating with a 5 person sales team, in compliance with State Farm and North Carolina insurance regulations.
- Assessed client risk exposures and recommended coverage, explaining cost vs. protection tradeoffs.

Service Assistant & Food Runner | **Ruth's Chris Steak House** | Greensboro, NC

October 2023 – February 2025

- Coordinated ticket timing between kitchen and front-of-house for 250+ guests per shift (up to 900 at peak), keeping service on pace during rushes.
- Trained new food runners on back-of-house operations and shift procedures, using clear, step by step communication under pressure.

ANALYTICAL PROJECT EXPERIENCE

Equity Valuation of RTX Corporation | Fall 2024, revised 2026

- Built a DCF valuation at a 6.15% WACC with sensitivity analysis, cross-checked against peer P/E and EV/EBITDA multiples, estimating fair value of \$125 to \$133 per share vs. \$122 at the time of analysis.
- Benchmarked RTX against Boeing and Lockheed Martin on profitability, liquidity, and leverage, identifying RTX's 19.21% gross margin as the strongest in its peer set.
- Used AI assisted review (Claude) to audit my 2024 model, caught two errors, and rebuilt the valuation with documented changes.

ECG Patient Matching Model, Wake Forest School of Medicine Build-A-Thon | Sept 2026 – Present

- Led modeling for a three person team, building a Siamese CNN and feature neural net ensemble in Python (TensorFlow/Keras) that scores whether two ECGs belong to the same patient, trained on 37,000+ ECGs.
- Improved held-out AUROC from 0.948 to 0.984 on hospital vs. Apple Watch matching, tuning every setting on a separate practice set to avoid overfitting the test.
- Built a reproducible, versioned training and scoring pipeline on GitHub so teammates and judges can rerun every result.

Python Market Analysis Tools & Independent Futures Trading | March 2020 – Present

- Built Python tools (pandas, yfinance) to automate momentum screening and backtest a moving average crossover strategy, finding it underperformed buy and hold (31.4% vs. 56.9%) on AAPL.
- Manage risk on MNQ and MES index futures with defined stop losses and 2 to 5% of account risk per trade.
- Log entry, exit, and outcome data for every trade to track performance over time.
